Bensalem, PA— Feb. 22, 2018 — H₂O Degree, the leading supplier of utility management products for multi-family facilities for over a decade, announces a new 60-page catalog, *"Utility Management Solutions for Multi-Family Facilities,"* that simplifies the application and specification process for everyone involved – from building owners and managers to engineers and maintenance staff. Now available for download on the company's website, the catalog details the benefits of using H₂O Degree's advanced submetering, leak detection, thermostat control and reporting solutions, all which support increased building efficiency, lowered utility costs, energy-saving Green Building initiatives and LEED certification programs. It also provides extensive product application information, technical specifications, engineering data and practical information about reporting and billing.

The H₂O Degree system employs a unique combination of two-way wireless mesh technology, water meters, electric meters, "smart" Green Thermostats, as well as daily water meter usage and leak-detection reporting. The new catalog presents case studies about residential buildings that have already realized dramatic utility cost savings using the comprehensive systems approach, such as cutting their water usage in half. It also provides detailed information about company's wide-ranging product offerings for:

- Utility Submetering – Water, Electric, Gas and BTU
- Water Leak Detection
- Wireless Thermostat Control
- Utility Consumption Analysis and Reporting

"H₂O Degree's new catalog offers a wealth of valuable information for incorporating H₂O Degree's advanced water and energy-efficiency solutions to save money at multi-family buildings," said H₂O Degree's president, Don Millstein. "Property owners and managers can use our system's smart water meters, thermostat control capabilities and daily leak-detection reporting to pinpoint and fix water leaks and to accurately bill tenants for their individual usage. This enables them to reduce and recoup utility costs – the single largest controllable expenditure in multi-family communities – while also earning valuable LEED v4 points and boosting property values."

To request a copy of the new H₂O Degree catalog, or to learn how H₂O Degree's submetering and leak detection system results in significant savings, please go to www.h2odegree.com.

About H₂O Degree

H₂O Degree manufactures a broad line of wireless mesh, radio-based submetering and leak detection systems that measure individual apartment or condo use of water, domestic hot water energy, boiler and chiller energy, electricity, gas and BTUs. The systems are ideal for tenant billing, leak detection reporting down to the toilet level and energy analytics. The company also offers Green Thermostats, which track energy use and apartment temperature while allowing tenants and property owners to set temperature set-points and schedules, adjust set-back temperatures when tenants are away or asleep, report HVAC maintenance issues, and provide control for vacant utility cost. For more information, please go to: www.h2odegree.com.
